

Baum-Welch Algorithm for Hidden Markov Models Using Algebraic Decision Diagrams

Sebastian Aaholm*, Lars Emanuel Hansen†, Daniel Runge Petersen[‡],

Abstract—This is a placeholder abstract. The whole template is used in semester projects at Aalborg University (AAU).

1 INTRODUCTION

In this section we present some introductory ways to use the tools within \LaTeX in general, and this template in particular. For example, this is a citation [1], while this is a multi-citation[1, 2].

The column width of the IEEE template is 3.5 inches, so if you generate your plots with this width or less, the output will be the best. For example, Listing 1 contains the code to generate the image in Figure 1 using Python with matplotlib, and exported as pgf (T_EX).

Listing 1. Code to generate the graph.pg

1.1 Tables and Figures

1.2 Algorithms, Theorems, and Proofs

There are a few different things outside the normal figure and table floats that are very relevant when writing a scientific paper or article. For example, you may wish to typeset theorems as in Theorem 1.

Theorem 1 (Pythagorean theorem). *This is a theorem about right triangles and can be summarized in the next equation*

$$x^2 + y^2 = z^2$$

Or ref like Theorem 1 Similarly, for proofs:

Proof. To prove it by contradiction try and assume that the statement is false, proceed from there and at some point you will arrive to a contradiction. \square

Note that proofs are not a numbered environment, and as such can't be referenced by default.

INSERTION-SORT(A, n)

```

1  for  $i \leftarrow 2$  to  $n$ 
2       $key \leftarrow A[i]$ 
3      // Insert  $A[i]$  into the sorted subarray  $A[1 : i - 1]$ .
4       $j \leftarrow i - 1$ 
5      while  $j > 0$  and  $A[j] > key$ 
6           $A[j + 1] \leftarrow A[j]$ 
7           $j \leftarrow j - 1$ 
8       $A[j + 1] \leftarrow key$ 

```
